- Interventions Fidelity & Progress Monitoring
- Developing Effective Professional Learning Communities (PLCs)/Data Teams
- Quality Core Instruction
Half-day Workshops

Classwide Interventions

Learn an efficient process to analyze screening data and plan supplemental tier 1 supports for whole-class implementation. Specifically, we introduce a classwide intervention framework for classrooms where over half of students are below benchmark. This process helps strengthen core instruction and, within a short time frame of ten days, the number of students requiring intervention can be significantly reduced. Intervention manual required.

Tier 2 Diagnostics & Intervention Basics

This workshop provides an introduction to tier 2 decision-making by introducing diagnostic tools. An overview of the data-driven diagnostic process in tier 2 provides participants with clear next steps to begin their small group interventions. This workshop is best suited for schools/districts that have already received training in classwide interventions and want to introduce simple next steps or for those who, after analyzing their classroom screening data, do not see a classwide need in their school. This workshop does not include discussion and demonstration of specific interventions nor does it provide in-depth support for progress monitoring. This workshop can be combined with classwide interventions (above) to create a full-day option. In-depth tier 2 support is offered through a full-day workshop (please see below). Intervention manual required.

Intervention Fidelity & Progress Monitoring

In this workshop, we expand on the data-driven decision making process as we examine progress monitoring data and analyze the impact of intervention. A focus is placed on continuous progress monitoring, both at the skill and grade level, as well as decision making using ongoing, reliable data collection. As we review the importance of intervention fidelity, participants learn effective components of interventions. We model
the problem-solving process that helps determine student growth in intervention and introduce a tool for systematic review of progress monitoring data. Prior participation in Tier 2 Diagnostics & Intervention Basics workshop (above) is required. Intervention and assessment manuals required.

**Developing Effective Professional Learning Communities (PLCS)/Data Teams**

Collaboration in school settings is an integral part of successful school improvement. The PLC process promotes the development of common language, a common set of instructional practices, and most importantly, a professional sense of community. This workshop provides essential tools for school staff to support the implementation of a PLC or data team framework with a focus on K-5 literacy. Specifically, we introduce the process of continuous examination of student data and how it is reinforced by protocols to guide instructional decisions, along with opportunities to reflect on the effectiveness of instructional practices in relation to meeting achievement goals.

**Quality Core Instruction**

Overall growth in literacy for all students is dependent upon strong core instruction in the classroom. In this workshop, we demonstrate components of our research-based coaching tool and observation checklist that support improvement in literacy instruction. The tools assist teachers and coaches in finding opportunities to integrate interventions into core instruction. Participants have an opportunity to watch short videos of teachers instructing their students and are provided with a chance to reflect on research-based literacy practices. Intervention manual required.

**Implementation Overview & Planning for Literacy Coaches/Coordinators & Administrators**

This workshop provides an introduction to the PRESS framework for literacy leaders and administrators who are considering implementing a systematic approach to multi-tiered systems of support, focusing on implementation strategies and opportunities. We discuss the PRESS procedural support tool that covers the necessary components for implementation and correlates with the PRESS decision making process. Key tips and suggestions for implementing PRESS, with real world examples, are highlighted throughout the workshop. Intervention manual required.
**Full-day Workshops**

*Tier 2 Diagnostics & Intervention Basics*

* +

*Intervention Fidelity & Progress Monitoring*

Explore the PRESS data-driven decision making practice for determining targeted, small group interventions with a full-day of comprehensive coverage of Tier 2 diagnostics, interventions, fidelity, and progress monitoring. Participants learn how to identify students' intervention needs, using the PRESS diagnostic tools and then select and implement specific, skill-based interventions from the PRESS Intervention Manual. This workshop also covers continuous progress monitoring as part of the tier 2 intervention process, emphasizing decision-making using ongoing, reliable data collection, with examples provided. Intervention and assessment manuals required.

*All of the half-day workshops above may be combined to create full-day offerings.*

*Other suggested combinations include:*

- Classwide Interventions + Tier 2 Diagnostics & Intervention Basics

- Quality Core Instruction + Classwide Interventions

- Tier 2 Diagnostics & Intervention Basics + Developing Effective PLCs
