## Overview
Students use paper folding to model and name unit and non-unit fractions. Students compare the paper-folding model to fraction circles. Students record fractions in words: one-fourth, two-thirds.

## Materials
- Paper strips for folding for students
- Fraction Circles for teacher
- Student Pages A-L

## Teaching Actions
1. Prior to using paper strips to model fractions it is necessary to practice folding strips into 2, 3, 4, 6, 8, and 12 equal parts. Ask students to follow along with you as you model how to fold paper strips. Fold paper strip into two equal parts:

   ![Folded Paper Strip](image)

2. Keep it folded. Now fold it again into two equal parts. Ask: how many equal parts do you think we have? Unfold:

   ![Unfolded Paper Strip](image)

3. Ask students to verbalize how to fold paper strips to form four equal parts.

4. Model folding into three equal parts. Form the letter “S” with a paper strip to get close to 3 equal parts. Press down on paper

## Comments
1. Most teachers who have used these lessons have needed 2 class periods for lesson 4.

2. Cut paper strips from 8.5” by 11” sheets of paper about 1 inch wide and 8.5” long.
Teaching Actions

5. Model sixths. Fold paper strip into thirds and then fold into two equal parts. Have students do this and guess, before unfolding, the number of equal parts they expect.

6. Ask students if they could have gotten sixths by folding first in halves and then in thirds? Try it.

7. Ask students to think of strategies for folding 8ths and 12ths. Encourage trial and error strategy. Have them verbalize successful ways. For 12ths reinforce multiple ways.

8. Students can shade equal parts of paper strips to show fractions. Using fraction circles, show one-fourth using a black circle as the unit.

```
Black    = one-fourth of black circle

Put single blue onto black circle.
```

Say: To show one-fourth of a black circle I divided it into four equal parts. Pick up one of the parts to show one-fourth.

Comments

1. Students often will expect 5 equal parts (3+2). They are more apt to think additively than multiplicatively.

2. To get 12ths:

   halves -> halves -> thirds
   thirds -> halves -> halves
   halves -> thirds -> halves
### Teaching Actions

9. Ask: How can you show me one-fourth on a paper strip? Have students fold into 4 equal parts and shade in one of the 4 equal parts. Record fraction name as 1-fourth.

10. Discuss how the two displays for one-fourth are alike and different.

12. Look at two displays for one-third:

   ![One-third Diagrams]

   1-third

13. Shade in another third on the paper strip.

   ![Shaded Thirds]

   Ask: how many thirds are shown now? How can I show two-thirds with circles? (Pick pu two browns and say these are two-thirds of black.) State that 2-thirds is 1-third and 1-third more:

### Comments

3. The similarity between the two displays is what’s important. A unit is divided into equal parts and one or more equal parts are highlighted in some way.

4. Non-unit fractions are introduced as sums of unit fractions: 2-fourths is 1-fourth and 1-fourth.
### Teaching Actions

14. Now draw a picture of a square. Divide it into 4 equal parts and shade 3 of 4 parts. Ask students to fold paper to show the same fraction that you drew. Record fractions as 3-fourths: 1-fourth + 1-fourth + 1-fourth.

15. Return to fraction circles. Model problems as in lesson 3, this time with non-unit fractions.

**Examples:**

1. The black circle = 1. What is the value of 1 blue; 3 blues- 1 brown; 2 browns; 3 reds.
2. The yellow piece = 1. What is the value of 1 blue; 2 reds; 3 grays; 2 pinks.

16. There are several student pages in this lesson. **Select the most appropriate ones for your students.** Students may need some assistance to do some of the pages. See **Comments** for clarification.

### Comments

5. Students now have seen two models for fractions. Practice pages that follow this lesson give students a chance to apply their new learning to pictures of units in different shapes.

6. Teacher Notes for Student Pages:  
   - **B:** Problems 6 and 7 provide some problem solving. Students reconstruct the unit given one part. For example if □ equals 1-half, then the whole must be two of those parts:

   ![Diagram](image)

   If □ equals 1-fourth, then the whole must be four of those parts:

   ![Diagram](image)

   **G:** Clarify with students that a picture may need to be modified to determine if 2-fourths are shaded in. For example:

   - Is 2-fourths shaded?
   - 2-fourths can easily be seen once the picture is completed by drawing in the needed lines.

   **J:** This type of modification will be needed on some pictures to determine the fraction amount shaded.
1. Here is a picture of a candy bar.

Draw to show the candy bar divided into 5 equal-sized pieces.

2. Here is a picture of a pan of brownies.

The pan of brownies is cut into ___________ equal-sized parts.

Each piece is ___________ of the whole pan.

3. O-So-Good candy bars come in the shape of a square. After Janis ate one pieces of an O-So-Good candy bar, it looked like this:

The piece that Janis ate is ___________ of the whole candy bar.

4. Tom’s patio is a rectangle. Draw a picture of Tom’s patio. Show on your drawing that the patio is in 9 equal-sized parts.

Each part is ___________ of Tom’s patio.
5. Devan’s patio looks like this:

Draw on Devan’s patio to show it divided into 3 equal-sized parts.

Each part is ____________ of Devan’s patio.

6. One-half of a coffee cake was left after a party was over. The half looked like this:

Draw a picture of the whole cake.

Explain to your classmates how you solved the problem.

7. Willis, Vang, Ellen and Marta shared part of a candy bar equally. Marta’s share looked like this:

Draw a picture to show the whole candy bar.

Explain to your classmates how you solved the problem.
For each exercise, look at the figure and then answer the question and write the word name for each fraction.

1. 
   
   _____ equal-sized parts.
   Each part is ____ __________ of the whole.

2. 
   
   _____ equal-sized parts.
   Each part is ____ __________ of the whole.

3. 
   
   _____ equal-sized parts.
   Each part is ____ __________ of the whole.

4. 
   
   _____ equal-sized parts.
   Each part is ____ __________ of the whole.

5. 
   
   _____ equal-sized parts.
   Each part is ____ __________ of the whole.
1. ______ equal-sized parts.
   Each part is ____ _________ of the whole.

2. ______ equal-sized parts.
   Each part is ____ _________ of the whole.

3. ______ equal-sized parts.
   Each part is ____ _________ of the whole.

4. ______ equal-sized parts.
   Each part is ____ _________ of the whole.

5. ______ equal-sized parts.
   Each part is ____ _________ of the whole.
You’ll need paper strips for folding. For any four of the figures shown below, fold paper strips to model the fraction that the figure models. After you have folded and shaded your paper, write on it the fraction you have shown (use words, not symbols).
Directions:

You’ll need paper strips for folding. For any four of the figures shown below, fold paper strips to model the fraction that the figure models. After you have folded and shaded your paper, write on it the fraction that you have shown (use words, not symbols).

2.

3.

4.

5.

6.

7.

8.
Look at each picture carefully. Place an “X” beside each picture that shows 2-fourths shaded in. You may need to draw in lines to determine if 2-fourths are shaded.
2. For each diagram, fill in the blanks to tell about the diagram.

a. 
   Number of equal parts ________
   Number of equal parts shaded ______
   The fraction shaded is _______ -sixth

b. 
   Number of equal parts ________
   Number of equal parts shaded ______
   The fraction shaded is 1- ________

c. 
   Number of equal parts ________
   Number of equal parts shaded ______
   The fraction shaded is ____________

d. 
   Number of equal parts ________
   Number of equal parts shaded ______
   The fraction shaded is ____________
e. Number of equal parts ___________
   Number of equal parts shaded ______
   The fraction shaded is ___________

f. Number of equal parts ___________
   Number of equal parts shaded ______
   The fraction shaded is ___________

3. Write words like 2-fourths, 3-fifths, and so on for the fraction shaded by each diagram.
   a. Write _________________
   b. Write _________________
   c. Write _________________
4. Write the fraction that is shown:
   a. 
   Write 
   b. 
   Write 
   c. 
   Write 
   d. 
   Write 
   e. 
   Write 
   f. 
   Write
5. Circle the figures that have equal-size parts.

1. 

2. 

3. 

4. 

5. 

6. 

7. 

8. 

9.

**Problem Solving**

Directions:

For each of the drawings write the color corresponding to the part marked a, b, c, and so on. Then write the word name for the fraction which the color represents. You can use fraction circles if you need them. Your teacher will help you with exercise 1.
