Living through the deployment cycle comes with a great deal of uncertainty. The post 9/11 era has been especially challenging for families because of the added element of terrorism and active wars. The idea of ambiguous loss describes the feelings family members may be faced with when unclear and vague stressors are present. For example, when military families cannot predict their next move or the next deployment, the sense of uncertainty may feel like a layer of tension that overlays everyday life. Another example of ambiguous loss is when family members worry about harm and safety while a loved one is deployed. In this case, the deployed loved one is physically absent while psychologically present in thoughts.

Babies and toddlers may find it especially hard to cope with disruptions that change the routine of their daily life. In the first years of life, children are not able to express their feelings clearly. They may feel distressed when a parent leaves, and they also may experience sadness and loneliness. Their distress is often visible in irritability and tantrums. To deal with emotional stress and ambiguity, they may act out their frustrations in play. Sometimes they struggle when the deployed parent returns. The transitions around the deployment and reintegration may be more difficult for children than the actual deployment because of the changes in routines and responsibilities. Babies and young children may need extra support and love in these times.

Helping Young Children Cope

Providing stability and routine is crucial for young children. Here are some tips for addressing ambiguous loss throughout the deployment cycle:

- Tap into your kin network for support if possible. Grandparents are often key players in providing support and extra care. Being with those they love and trust can help young children feel secure.
- If possible seek to make playdates with other toddlers & parents whose loved one is deployed.
- Keep routines stable. Knowing what to expect hour by hour can help calm their anxieties.
- Because toddlers cannot verbalize feelings easily, help them identify and label what they are feeling.
- Spend time with your little one just playing, singing, or reading a book and snuggling.
- Family rituals that children can look forward to foster a sense of belonging. Also, having regular chores may help even young children feel that they can contribute.
- Facilitating digital communication (email, Face Time, Skype) helps build a feeling of constancy in spite of distance.

Your Baby/Toddler:

- Is becoming more coordinated and active (crawling, walking, throwing, climbing, stacking).
- Has a limited attention span.
- May want to be more independent in dressing, brushing teeth, etc.
- Temper tantrums are common.

Parent Tips:

- Sight, sound, touch and smell are very important facets of a baby’s life. Allow the deployed parent to be present as much as possible during deployment through pictures and scents.
- Make sure people of the same gender as the deployed parent hold and play with your baby so they don’t get used to only women or men interacting with them.

ADAPT is gearing up for the next wave of the project. You can help us better understand reintegration in military families and have a say in future resources and services provided to reintegrating military families!

If you live in Minnesota, are a parent of a 5-12 year old, and have been deployed (or your spouse/partner has been deployed) since 2001, we want to hear from you!

To learn more about the ADAPT project, go to www.cehd.umn.edu/fsos/adapt.
If you know someone who might be interested, you can earn a $20 gift card for referring a family that joins the study.
For more information, you can call us at 612-624-4830 or e-mail us at adapt@umn.edu.
